

SOLARSUB

RDTAS & TAHS

Reelable Digital Towed Array Sonar & Handling System

SOLARSUB RDTAS is a Reelable Digital Towed Array Sonar designed and produced by SAES as a cost-effective complement to hull sonar providing greater detection range and easy platform integration.

SOLARSUB RDTAS provides wide area surveillance including surface and submarine stern, long range detection, multiple track capability and improved pre-classification aids.

The **SOLARSUB RDTAS COTS** modularity, the small footprint components and the low power consumption allow simple installation onboard the submarine by using the Clip-on or the Winch possibility according to platform capabilities.

electronica-submarina.com

SOLARSUB RDTAS system is made up of the following units:

- Towed Array Sonar compose of Tow Cable and Acoustic Module.
- Signal Conditioning Unit.
- Operator Console.
- Junction Box in case of Clip-on installation.

Towed Array Handling System (TAHS) can be provided both together with the **SOLARSUB RDTAS** or independently in order to reel a existing array onto a capstan located on the submarine. Composed by TAHS Winch with Drum, Spooling, Cutters, Flushing and Deployer.

Clip-on Installation

Technical Characteristics

- Broad Band Detection** Simultaneous sub-bands with 360° coverage.
- Narrow Band Detection** LOFAR in four simultaneous sub-bands.
- Threat Analysis** ZOOMS and MULTIVERNIERS running simultaneously in all the beams.
- Analysis Beams** DEMON associated to any detected contact.
- Target Tracking** Automatic tracking in Narrow and Broad band.
- Digital Mission Data Recording** Using data cartridge media.
- Integration Time and Anti jamming** For Narrow and Broad band.
- Audio** Output channels for audio monitoring, recording, classification and tracking.
- Transient Detection** In all the full beams.
- Interceptions and analysis** Of possible active detections.
- Broad Band Detection** Using cross correlation processing.

Additional Capabilities

- Analog Data Recording
- Interactive Classification Aids
- On Board Training Simulator

Winch Installation

SOLARSUB RDTAS & TAHS have been successfully tested against shock & vibration, EMC and environmental tests.

SOLARSUB RDTAS & TAHS are in service onboard spanish submarines. Extensive sea trials were performed in order to validate the system and to check the full performances.
